Measure warm up!

Play this game. Start with level 1 and move to level 2 when you are confident.

<https://www.topmarks.co.uk/maths-games/measuring-in-cm>

Solve the word problems on the next slide using column methods to help. You will need to use addition or subtraction and first you will need figure out which one to use. You can do this by looking at the words used within the problem.

There are 167 books in one classroom and 392 books in the other. How many books are there altogether in both classrooms?

The word altogether means you are taking both numbers and collecting them together. This means you will add.

1

If you have 72 rubber ducks and are given another 17, how many rubber ducks would you have?

2

If you have 67 slices of pizza and 15 slices are eaten, how many slices would you have left?

3

If you count 85 ladybirds in your garden and 21 fly away, how many ladybirds would be left?

4

If you have 47 pennies and you find another 13 in your pocket, how many pennies would you have?

1 A family drive 208 miles from London to Manchester, and then 213 miles on to Glasgow.  
How far did they travel altogether?

2 A packet of lentils weighs 450g and a packet of kidney beans weighs 385g.  
How much do they both weigh altogether?

3 Jay has a collection of 263 football cards. His brother has 189.  
How many more football cards does Jay have?

4 A shopkeeper has 367 bottles of lemonade.  
He orders 480 more. How many bottles of lemonade will he have now?

1

A lorry driver has a 561 mile journey. He stops for a break after 314 miles. How much further has he to travel?

2

A cricket team score 456 in the first innings and 249 in the second innings. How many runs did they score altogether?

3

Edward buys a drink for 82p. He pays with a £1 coin. What change does he receive?

4

A shopkeeper counts 456 boxes of eggs in his storeroom on Monday. He then orders 260 boxes of eggs to arrive on Friday. He drops 68 boxes when unpacking them. How many does he have left at the end of the week?

Answers!

1.  $72 + 17 = 89$

2.  $67 - 15 = 52$

3.  $85 - 21 = 64$

4.  $47 + 13 = 60$

1.  $208 + 213 = 421$

2.  $450 + 385 = 835$

3.  $263 - 189 = 74$

4.  $367 + 480 = 847$

1.  $561 - 314 = 247$

2.  $456 + 249 = 705$

3.  $100p - 82p = 18p$

4.  $456 + 260 = 716$   
 $716 - 68 = 648$

Watch the video about inference.

Then look at the scenarios written on the next page. Use your inference skills to write down what has happened before. Find the words that give you clues.

For example - Why does the goalkeeper have his head in his hands? What clues tell us how he is feeling? What could have happened to make him feel that way?

The goalkeeper lies in the mud  
with his head in his hands.

The goalkeeper lies in the mud with his head in his hands.

Ali rubs his knees and looks sadly at his twisted bicycle wheel.

About to buy his favourite comic, Luke counts his money and wrinkles up his nose.

Mum has been to the hairdresser. When she gets home, she looks in the mirror and frowns.

Maggie is upset. She was about to rip off the last piece of wrapping paper when the music started again.

While Dad is making a curry for supper, there is a groaning noise from the kitchen and the clatter of a saucepan on the floor.

Here is a thought bubble showing what someone is thinking. Check it for clues.

I arrived a week ago today. Don't know why I thought I'd need a coat. Looking in the mirror, I wish I'd brought my sun block. Now, today, Sunday 10<sup>th</sup> August, I've had to pack my bags. My best friend, who was looking after Bruno has had to call in the vet. Must go home.

Use this speech bubble and the clues you've found to answer the questions on the next slide.

1. Where is this person? Circle one.

at home

in town

on holiday

2. When did they arrive?

---

3. What is the weather like where they are?

---

4. How do you know? Write down **two** clues.

---

---

5. What is happening now, on Sunday 10<sup>th</sup> August?

---

6. Who is Bruno?

---
